Infosys Financial Statement Analysis

FY2023 to FY2026

Project Process and Financial Analysis Report

Item	Details
Project title	Infosys Financial Statement Analysis, FY2023 to FY2026
Financial years covered	FY2023, FY2024, FY2025, FY2026
Statements analysed	Income Statement, Balance Sheet, Cash Flow Statement
Reporting unit	₹ crore (as reported)
Tools	Python (Google Colab), Pandas, NumPy, Excel, Power BI, DAX
Prepared by	Janga Vignesh
Date	November 2026

Note on completeness. This report uses only the screenshots and information supplied for the project. Where a screenshot, code cell or output was not supplied, the report says so and marks the item as [To be added] instead of assuming a result. These items are collected in Appendix A. Figures read from chart labels are rounded by Power BI (for example 146.8K means about ₹146,800 crore), so growth rates calculated from them are approximate unless stated otherwise.

1. Project Introduction

1.1 Project title

Infosys Financial Statement Analysis, FY2023 to FY2026: Data Preparation in Python and Dashboard Reporting in Power BI.

1.2 Project overview

This project is an end-to-end analysis of the financial statements of Infosys for four financial years. The raw statement data was held in an Excel workbook. I loaded and prepared the data in Python using Google Colab, then used the prepared data to build a four-page Power BI dashboard covering revenue, profitability, financial health, cash flow and expenses.

1.3 Business problem

Annual report statements present figures as separate tables, and in the source workbook the values are stored as text (for example “1,49,468” and “(73)”). Stakeholders such as management, investors and analysts need to see quickly how growth, profitability, financial position and cash generation changed from year to year. This project converts the reported figures into a structured numeric dataset and presents the key measures in one dashboard.

1.4 Project objectives

- Load the Infosys raw financial data and prepare it for analysis.

- Check the quality of the prepared data before using it.
- Build Power BI pages for the executive overview, profitability, financial health and cash flow, and expense breakdown.
- Measure revenue growth, net profit growth, margins, tax rate, EPS, liquidity and free cash flow for FY2023 to FY2026.
- Summarise the findings and give practical recommendations to stakeholders.

1.5 Scope of analysis

Covered: the Income Statement, Balance Sheet and Cash Flow Statement of Infosys for FY2023 to FY2026, in ₹ crore, as recorded in the workbook.

Not covered by the material supplied: peer comparison, segment or geography data, headcount, share price or valuation, and forecasting. Where a conclusion would need such data, this report says so.

1.6 Financial years and statements

The financial years covered are FY2023, FY2024, FY2025 and FY2026. The three statements analysed are the Income Statement, the Balance Sheet and the Cash Flow Statement. The raw data also contains Other Comprehensive Income lines under the Income Statement (Figure 1).

2. Tools and Technologies

Tool	Purpose in this project
Python	Used in Google Colab to load the workbook, select the consolidated sheet and prepare the data.
Google Colab	Cloud notebook where the code was written and run. The workbook was read from the Colab /content folder (Figure 2).
Pandas	Used to open the workbook (ExcelFile), read the RAW_ALL_DATA sheet into a DataFrame (read_excel) and inspect its shape, columns and first rows.
NumPy	Imported as np alongside Pandas for numerical work. No specific NumPy operation is visible in the supplied screenshots.
Excel	Format of the source workbook (Infosys_Raw_Financial_Data.xlsx) and of the cleaned export.
Power BI	Used to build the four-page dashboard from the prepared data (Figures 4 to 9).
DAX	Language used for Power BI measures such as Total Revenue, Net Profit Margin %, Current Ratio and Free Cash Flow. The DAX formulas themselves were not supplied (see Appendix A).

3. Data Collection and Understanding

3.1 Source of the data

The data comes from Infosys annual reports. The Source_PDF column of the workbook shows the file name infosys-ar-24.pdf for the FY2023 rows, and a further column (its name is cut off in the screenshot, beginning “Printed_Report_”) holds a page reference. This lets each value be traced back to the printed report.

[To be added: how the workbook was prepared, which Infosys reports were used for FY2024 to FY2026, and whether the figures are consolidated or standalone]

3.2 The original Excel workbook

The workbook is named Infosys_Raw_Financial_Data.xlsx and contains six sheets (Figure 2).

Sheet	Purpose
START_HERE	Contents not captured in the screenshots. The name suggests an introduction to the workbook.
RAW_PNL	Raw Income Statement (profit and loss) data.
RAW_BALANCE_SHEET	Raw Balance Sheet data.
RAW_CASH_FLOW	Raw Cash Flow Statement data.
RAW_ALL_DATA	All statements in one sheet. This is the sheet used in the project (described in the code as the consolidated raw data).
SOURCE_LOG	Contents not captured in the screenshots. The name suggests a log of data sources.

The purposes of the three statement sheets and of RAW_ALL_DATA are taken from the sheet names and the notebook comment. START_HERE and SOURCE_LOG were not shown.

3.3 Data structure and columns

In RAW_ALL_DATA the first three rows hold a title bar, a subtitle and a blank row. The column headings are in row 4, and each data row is one line item of one statement for one financial year (Figure 1).

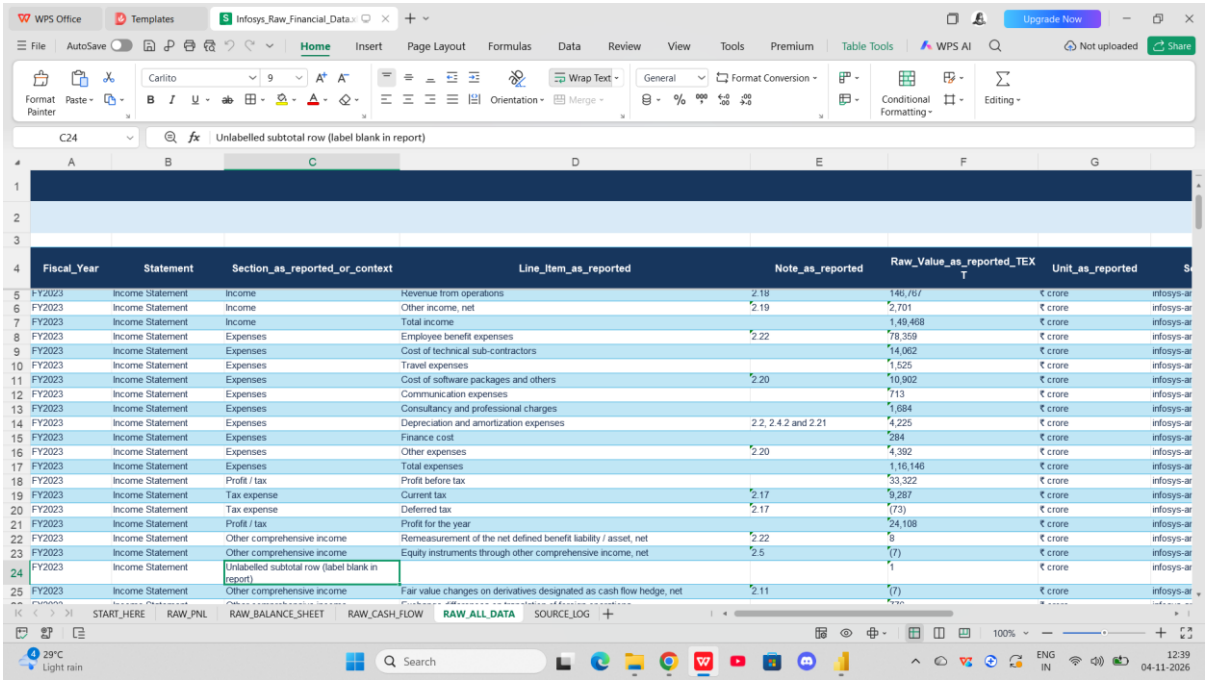

Figure 1: RAW_ALL_DATA sheet of the source workbook (FY2023 Income Statement rows).

Column	What it holds (as seen in the screenshots)
Fiscal_Year	Financial year, for example FY2023.

Column	What it holds (as seen in the screenshots)
Statement	Income Statement or Cash Flow (the Balance Sheet rows are not shown in the screenshots).
Section_as_reported_or_context	Section heading from the report, for example Income, Expenses, Profit / tax, Tax expense, Other comprehensive income, Operating activities, Investing activities.
Line_Item_as_reported	Name of the line item, for example Revenue from operations or Employee benefit expenses.
Note_as_reported	Annual report note number, for example 2.18. Blank for some rows.
Raw_Value_as_reported_TEXT	The value stored as text, for example “1,49,468” or “(73)”.
Unit_as_reported	Reporting unit, shown as ₹ crore.
Source_PDF	Source report file, for example infosys-ar-24.pdf.
Printed_Report_…	Page reference in the printed report. The full name is cut off in the screenshot.
Three further columns	The loaded DataFrame has 12 columns (Figure 2) but only nine are visible in the screenshots.

One row needs explanation. Row 24 (FY2023, Income Statement) has a blank line item. The section column records it as “Unlabelled subtotal row (label blank in report)” and the value is 1. The workbook therefore keeps rows that have no label in the original report, instead of dropping them.

3.4 Financial units and reporting periods

- All values are in ₹ crore. One crore is ten million.
- Values use Indian digit grouping in places, so “1,49,468” means 149,468. The same screenshots also show “146,767” with Western grouping, so the grouping is not consistent across rows. Removing every comma during cleaning handles both.
- Negative values appear in brackets in the Income Statement, for example “(73)” for deferred tax in FY2023.
- The period covered is FY2023 to FY2026.

3.5 The three financial statements

Statement	What it shows	Items used in this project
Income Statement	Revenue earned and expenses incurred over a year, and the resulting profit.	Revenue from operations, expense lines, profit before tax (PBT), tax expense, profit for the year, EPS.
Balance Sheet	What the company owns (assets), owes (liabilities) and what belongs to shareholders (equity) at the year end.	Total assets, total equity and liabilities, current ratio, working capital.
Cash Flow Statement	Actual cash moving in and out, split into operating, investing and financing activities.	Net cash generated by operating activities, investing and financing cash flow, expenditure on property, plant and equipment and intangibles, free cash flow.

4. Data Cleaning and Preprocessing

The steps below follow the order of the notebook. Figures 2 and 3 are the Colab screenshots supplied. For steps where no code or output was supplied, the report states what is visible, explains why the step is needed, and marks the missing evidence.

4.1 Importing the libraries

What was done. Imported NumPy and Pandas at the top of the notebook.

Why it was necessary. Pandas reads Excel files and holds tables as DataFrames. NumPy supports numerical operations.

Code or operation used.

```
import numpy as np
import pandas as pd
```

Output obtained. None. The cell runs without printed output.

What the output confirms. The libraries loaded without error, because the next cells ran.

4.2 Loading the workbook and listing its sheets

What was done. Set the file path to /content/Infosys_Raw_Financial_Data.xlsx, opened it with pd.ExcelFile and printed the sheet names.

Why it was necessary. To confirm the file can be read and to see which sheets are available before choosing one.

Code or operation used.

```
file_path = '/content/Infosys_Raw_Financial_Data.xlsx'
excel = pd.ExcelFile(file_path)
print("Available Sheets:")
print(excel.sheet_names)
```

Output obtained. Available Sheets: ['START_HERE', 'RAW_PNL', 'RAW_BALANCE_SHEET', 'RAW_CASH_FLOW', 'RAW_ALL_DATA', 'SOURCE_LOG'] (Figure 2).

What the output confirms. The workbook was uploaded correctly and contains the six expected sheets, including the consolidated RAW_ALL_DATA sheet.

```
import numpy as np
import pandas as pd
```

```
file_path ='/content/Infosys_Raw_Financial_Data.xlsx'
excel = pd.ExcelFile(file_path)
print("Available Sheets:")
print(excel.sheet_names)
```

```
Available Sheets:
['START_HERE', 'RAW_PNL', 'RAW_BALANCE_SHEET', 'RAW_CASH_FLOW', 'RAW_ALL_DATA', 'SOURCE_LOG']
```

```
# Load the consolidated raw data, skipping the first 3 rows of metadata to set proper headers
df = pd.read_excel(
    file_path,
    sheet_name="RAW_ALL_DATA",
    header=3
)

print("Dataset loaded successfully with correct headers!")
print("Shape:", df.shape)
print("Columns:", df.columns.tolist())
```

```
Dataset loaded successfully with correct headers!
Shape: (521, 12)
```

Figure 2: Google Colab code and output for loading the workbook and the RAW_ALL_DATA sheet.

4.3 Selecting the data and setting the headers

What was done. Read the RAW_ALL_DATA sheet into a DataFrame called df, using header=3. I used this consolidated sheet instead of reading and combining RAW_PNL, RAW_BALANCE_SHEET and RAW_CASH_FLOW separately.

Why it was necessary. The first three rows of the sheet are a title bar, a subtitle and a blank row (Figure 1), so the real column names are in row 4. In Pandas, header=3 means "use the fourth row as the header".

Code or operation used.

```
# Load the consolidated raw data, skipping the first 3 rows of metadata to set proper headers
df = pd.read_excel(
    file_path,
    sheet_name="RAW_ALL_DATA",
    header=3
)

print("Shape:", df.shape)
print("Columns:", df.columns.tolist())
```

Output obtained. "Dataset loaded successfully with correct headers!", Shape: (521, 12), and the column list, which begins Fiscal_Year, Statement, Section_as_reported_or_context, Line_Item_as_reported, Note_as_reported (Figure 2).

What the output confirms. The sheet holds 521 records and 12 columns, and the headers were read correctly. The shape counts data rows only, not the header row.

4.4 Understanding column names and data types

What was done. Displayed the first rows of the DataFrame to inspect its structure (Figure 3).

Why it was necessary. To see how the values actually look before deciding how to clean them.

Code or operation used. Viewing the DataFrame (the code cell itself is not in the screenshot).

Output obtained. Rows 0 to 3 are FY2023 Income Statement lines: Revenue from operations (146,767), Other income, net (2,701), Total income (1,49,468) and Employee benefit expenses (78,359). Note_as_reported shows NaN for Total income, which has no note number.

What the output confirms. Values are held as text with commas, mixed digit grouping and a unit column. Lines without a note show NaN, which is Pandas' marker for an empty cell.

	Fiscal_Year	Statement	Section_as_reported_or_context	Line_Item_as_reported	Note_as_reported	Raw_Value_as_reported_TEXT	Unit_as_reported	Source_PDF	Printed_Report_I
0	FY2023	Income Statement	Income	Revenue from operations	2.18	146,767	₹ crore	infosys-ar-24.pdf	299-
1	FY2023	Income Statement	Income	Other income, net	2.19	2,701	₹ crore	infosys-ar-24.pdf	299-
2	FY2023	Income Statement	Income	Total income	NaN	1,49,468	₹ crore	infosys-ar-24.pdf	299-
3	FY2023	Income Statement	Expenses	Employee benefit expenses	2.22	78,359	₹ crore	infosys-ar-24.pdf	299-

Figure 3: First rows of the DataFrame.

[To be added: data types output (for example df.info() or df.dtypes) before and after conversion]

4.5 Handling financial values stored as text

What was done. The Raw_Value_as_reported_TEXT column had to be converted from text to numbers. Two rules apply to the values visible in the workbook: remove commas, and treat a value in brackets as negative.

Why it was necessary. Text cannot be added, averaged or compared. Without conversion, a total or a growth rate cannot be calculated. A value such as "(73)" would also be read as text and not as −73.

Code or operation used. Not supplied.

[To be added: Colab cell used to remove commas and convert brackets to negative values]

The table below shows the rule applied to values that are visible in Figures 1 and 3. It illustrates the rule and is not a screenshot of the output.

Raw text (from the workbook)	Rule	Numeric value
146,767	Remove comma	146767
1,49,468	Remove commas	149468
(73)	Remove brackets, make negative	−73
(7)	Remove brackets, make negative	−7

Output obtained. The cleaning output was not supplied. In Power BI (Figure 4), FY2023 Cash Flow values appear as plain numbers without commas and with minus signs, for example 24108, −7076 and −8794.

What the output confirms. The Power BI view is consistent with the text values having been converted. The conversion code and its result still need to be shown for the document to be reproducible.

4.6 Converting the values to numeric format

What was done. A numeric value column was created for analysis. In Power BI it appears as Value_Cr, for example in the donut chart tooltip “Sum of Value_Cr” (Figure 9).

Why it was necessary. Charts and measures such as sums and ratios need a numeric field.

Code or operation used. Not supplied.

Output obtained. Value_Cr is summed correctly in Power BI. For example, Employee benefit expenses total 3,42,023.00 (Figure 9).

What the output confirms. A numeric column exists in the dashboard data. The step that created it is not shown.

[To be added: code that converts the cleaned text to numbers, and a check that no value failed to convert]

4.7 Handling missing values

What was done. Not supplied.

Why it was necessary. Empty cells can be dropped or treated as zero by calculations. The treatment must be a deliberate choice.

What is visible. Two kinds of missing data appear in the screenshots. Note_as_reported is NaN where a line has no note number (Figure 3). In the Power BI table, the FY2023 Cash Flow line “Interest receivable on income tax refund” has an empty value (Figure 4).

[To be added: missing value count per column and the treatment applied]

4.8 Checking duplicate records

What was done. Not supplied.

Why it was necessary. A repeated row would be counted twice in every total.

[To be added: duplicate check code and its output]

4.9 Validating the cleaned dataset

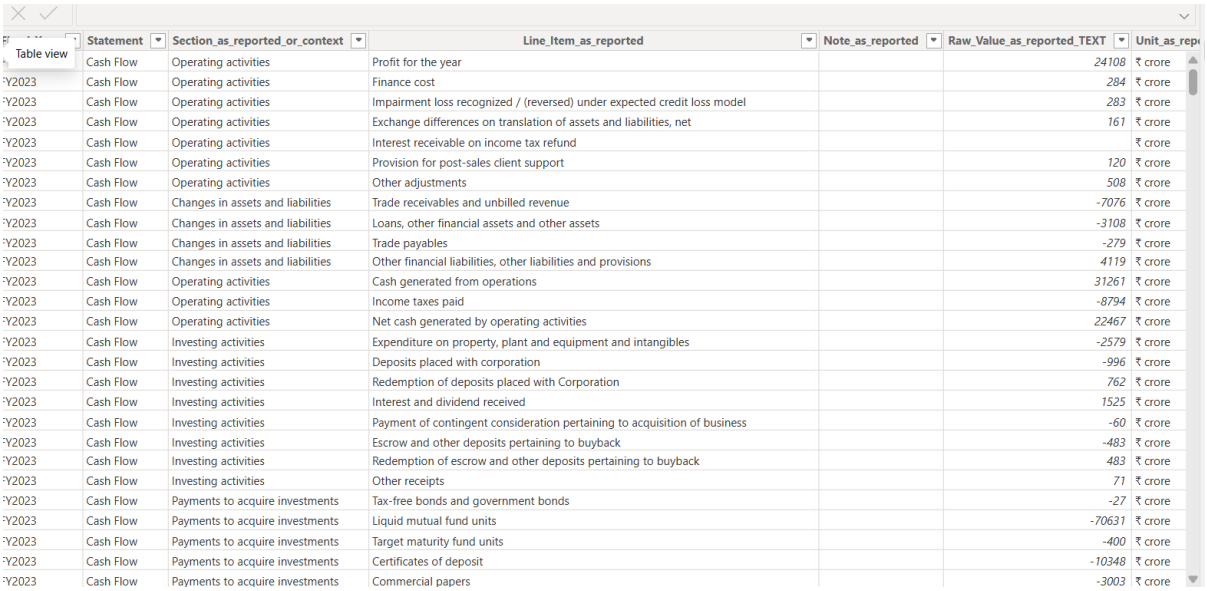

The validation results that can be reported from the supplied material are in Section 5.

4.10 Exporting the cleaned Excel file

What was done. The cleaned data was exported to Excel and used in Power BI.

What is visible. Figure 4 shows the data loaded in Power BI with the same column names as the raw sheet. The export code, file name and final row count were not supplied.

[To be added: export code and cleaned file name]

Statement	Section_as_reported_or_context	Line_Item_as_reported	Note_as_reported	Raw_Value_as_reported_TEXT	Unit_as_rep
Cash Flow	Operating activities	Profit for the year		24108	₹ crore
Cash Flow	Operating activities	Finance cost		284	₹ crore
Cash Flow	Operating activities	Impairment loss recognized / (reversed) under expected credit loss model		283	₹ crore
Cash Flow	Operating activities	Exchange differences on translation of assets and liabilities, net		161	₹ crore
Cash Flow	Operating activities	Interest receivable on income tax refund			₹ crore
Cash Flow	Operating activities	Provision for post-sales client support		120	₹ crore
Cash Flow	Operating activities	Other adjustments		508	₹ crore
Cash Flow	Changes in assets and liabilities	Trade receivables and unbilled revenue		-7076	₹ crore
Cash Flow	Changes in assets and liabilities	Loans, other financial assets and other assets		-3108	₹ crore
Cash Flow	Changes in assets and liabilities	Trade payables		-279	₹ crore
Cash Flow	Changes in assets and liabilities	Other financial liabilities, other liabilities and provisions		4119	₹ crore
Cash Flow	Operating activities	Cash generated from operations		31261	₹ crore
Cash Flow	Operating activities	Income taxes paid		-8794	₹ crore
Cash Flow	Operating activities	Net cash generated by operating activities		22467	₹ crore
Cash Flow	Investing activities	Expenditure on property, plant and equipment and intangibles		-2579	₹ crore
Cash Flow	Investing activities	Deposits placed with corporation		-996	₹ crore
Cash Flow	Investing activities	Redemption of deposits placed with Corporation		762	₹ crore
Cash Flow	Investing activities	Interest and dividend received		1525	₹ crore
Cash Flow	Investing activities	Payment of contingent consideration pertaining to acquisition of business		-60	₹ crore
Cash Flow	Investing activities	Escrow and other deposits pertaining to buyback		-483	₹ crore
Cash Flow	Investing activities	Redemption of escrow and other deposits pertaining to buyback		483	₹ crore
Cash Flow	Investing activities	Other receipts		71	₹ crore
Cash Flow	Payments to acquire investments	Tax-free bonds and government bonds		-27	₹ crore
Cash Flow	Payments to acquire investments	Liquid mutual fund units		-70631	₹ crore
Cash Flow	Payments to acquire investments	Target maturity fund units		-400	₹ crore
Cash Flow	Payments to acquire investments	Certificates of deposit		-10348	₹ crore
Cash Flow	Payments to acquire investments	Commercial papers		-3003	₹ crore

Figure 4: Power BI table view showing FY2023 Cash Flow rows.

5. Data Validation

5.1 Validation results

Validation item	Result	Status
Total records	521 rows in RAW_ALL_DATA (Figure 2)	Reported for the raw sheet. Final cleaned count not supplied.
Number of columns	12 (Figure 2)	Reported. Three column names not visible.
Missing values	NaN in Note_as_reported where no note exists; one empty value seen in FY2023 Cash Flow	Partly visible. Counts not supplied.
Duplicate records	Not supplied	[To be added]
Numeric conversion	Numeric Value_Cr field is used in Power BI; values show as plain numbers with minus signs (Figures 4, 9)	Indirect evidence only. Conversion check not supplied.
Financial year distribution	Not supplied	[To be added]
Statement-wise record distribution	Not supplied	[To be added]

What this tells us about data quality. The raw sheet loads cleanly with the correct headers, every row carries a source reference and a unit, and the missing values seen so far are expected (no note number, or an item with no reported value). The record counts by year and statement, and the duplicate check, are still needed to confirm that each year has a complete set of statements.

5.2 Reconciliation checks on visible FY2023 figures

As a further check on the cleaned data I recalculated subtotals from the individual lines visible in Figures 1 and 4, and compared them with the reported totals and the dashboard. All amounts are in ₹ crore.

Check	Calculation	Result
Total income	146,767 + 2,701	149,468. Matches the reported 1,49,468.
Total expenses	78,359 + 14,062 + 1,525 + 10,902 + 713 + 1,684 + 4,225 + 284 + 4,392	116,146. Matches the reported 1,16,146.
Profit before tax	149,468 − 116,146	33,322. Matches the reported 33,322.
Total tax	9,287 + (−73)	9,214.
Profit for the year	33,322 − 9,214	24,108. Matches the reported 24,108.
Effective tax rate	9,214 ÷ 33,322	27.65%. Matches the dashboard (Figure 7).
Net profit margin	24,108 ÷ 146,767	16.43%. Matches the dashboard (Figure 7).
Operating cash flow	31,261 − 8,794	22,467. Matches the reported net cash generated by operating activities.
Free cash flow	22,467 − 2,579	19,888, shown as 19.9K on the dashboard (Figure 8).
Balance sheet balance	Total assets compared with total equity and liabilities	Equal in all four years on the dashboard (126K, 138K, 149K, 156K).
Dashboard totals	Sum of yearly net profit labels (24.1 + 26.2 + 26.8 + 29.5)	106.6K, consistent with the card value ₹106.58K (Figure 5).

These checks confirm that the FY2023 Income Statement and Cash Flow lines tie to their reported totals, that the dashboard measures reproduce the reported values for FY2023, and that the balance sheet balances in each year. They do not replace the missing record-count and duplicate checks.

5.3 Cross-check that needs attention

The donut chart on Page 4 shows a total of 529.41K (Figure 9), but the annual total expenses on Page 1 add up to about 509K (116K + 122K + 129K + 142K, Figure 6). The donut also lists two depreciation categories, “Depreciation and amortization” and “Depreciation and amortization expenses”, each showing 18.62K (3.52%). The identical amounts suggest the same cost may be counted twice, and 18.62K would account for most of the 20K gap. This cannot be confirmed from the screenshots, so it should be checked in the data before the donut percentages are quoted. See Appendix A.

6. Power BI Dashboard Development

6.1 Loading the data and common design

The prepared data was loaded into Power BI. The table view (Figure 4) shows the same structure as the raw sheet, with FY2023 Cash Flow rows grouped under Operating activities, Changes in assets and liabilities, Investing activities and Payments to acquire investments.

The four pages share one design:

- A dark navy banner at the top of Page 1 with the title “INFOSYS”, “Financial Performance Dashboard” and “EXECUTIVE OVERVIEW | FY2023–FY2026 | ₹ CRORE”.
- A light cyan page background with white cards.
- Navy and bright blue as the main series colours, with orange used for net profit and the diluted EPS series on Page 2.
- Data labels on the charts, and a tile-style financial year slicer showing FY2023, FY2025, FY2024 and FY2026 in a two-by-two block.

The measures shown on the dashboard are Total Revenue, Total_expenses, Total Net Profit, Total PBT, Net Profit Margin %, Revenue Growth %, Effective Tax Rate %, Basic and Diluted EPS, Current Ratio, Working Capital, Operating Cash Flow, Investing Cash Flow, Financing Cash Flow and Free Cash Flow. The standard definition of each is given below with the page where it appears.

[To be added: DAX formulas for each measure, and the data model or relationships if any]

6.2 Page 1: Executive Overview

Page 1 gives a quick summary of the four-year performance (Figures 5 and 6).

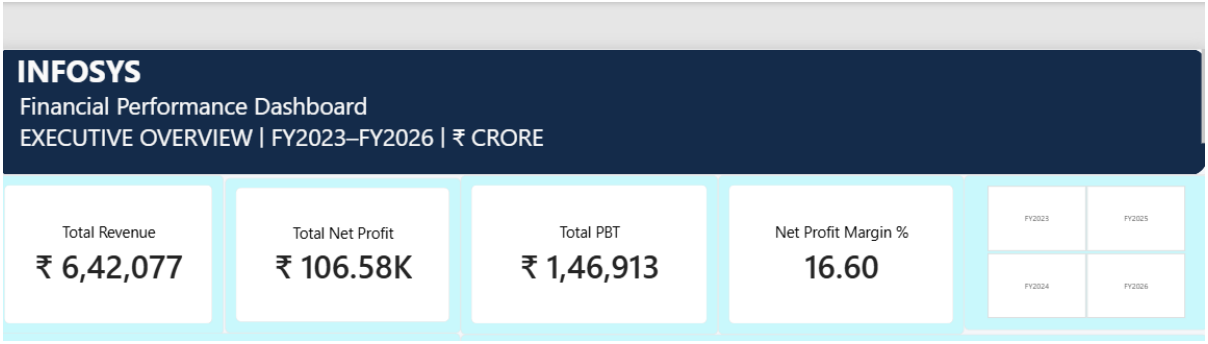

Figure 5: Page 1, Executive Overview: banner, KPI cards and financial year slicer.

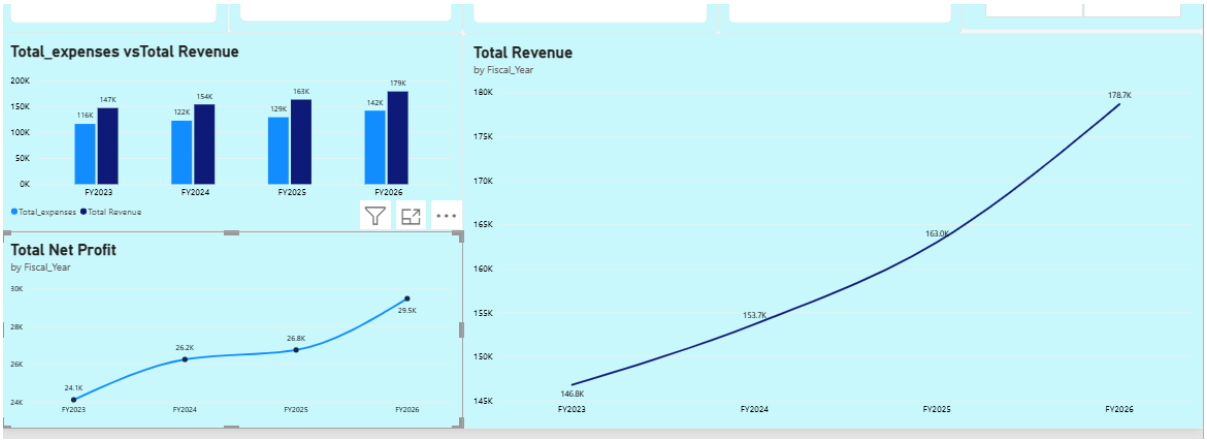

Figure 6: Page 1, Executive Overview: expenses versus revenue, revenue trend and net profit trend.

Visual	Type	Value or fields shown	Purpose
Total Revenue	Card	₹ 6,42,077	Shows the size of the business over the four years.
Total Net Profit	Card	₹ 106.58K	Shows total profit earned over the period.

Visual	Type	Value or fields shown	Purpose
Total PBT	Card	₹ 1,46,913	Shows profit before tax, which excludes the effect of the tax charge.
Net Profit Margin %	Card	16.60	Shows how much of each rupee of revenue is kept as net profit.
Total_expenses vs Total Revenue	Clustered column	Both measures by Fiscal_Year	Puts expenses and revenue side by side for each year.
Total Revenue	Line	By Fiscal_Year, 146.8K to 178.7K	Shows the direction and pace of revenue.
Total Net Profit	Line	By Fiscal_Year, 24.1K to 29.5K	Shows the direction and pace of profit.
Financial year slicer	Tile slicer	FY2023 to FY2026	Lets the reader filter the page by year.

Definitions. Total Revenue is revenue from operations: the FY2023 value of 146.8K matches the 146,767 line in Figure 1, so other income is not included. Net Profit Margin % is net profit divided by revenue, multiplied by 100. The overall margin of 16.60% matches ₹106.58K ÷ ₹6,42,077.

Layout and formatting. The page uses a banner, a row of four cards with the slicer on the right, and the charts below. One formatting point: the Total Net Profit card uses the K abbreviation while the other value cards show full numbers.

6.3 Page 2: Profitability Analysis

Page 2 looks at how revenue turns into profit, and at the tax charge and earnings per share (Figure 7).

Figure 7: Page 2, Profitability Analysis.

Visual	Type	Value or fields shown	Purpose
Revenue Growth %	Clustered column	FY2024 to FY2026	Shows how fast revenue grew each year. FY2023 has no bar because there is no earlier year in the data.
Effective Tax Rate %	Line	FY2023 to FY2026	Shows how much of PBT went to tax, which affects net profit.
Total PBT, Total Revenue and Total Net Profit	Clustered column	Three measures by Fiscal_Year	Shows the step from revenue to pre-tax profit to net profit in each year.
Net Profit Margin %	Line	FY2023 to FY2026	Shows profitability relative to revenue.
Basic vs Diluted EPS Trend (₹ per share)	Line, two series	Basic and Diluted by year	Shows profit per share and the small gap between basic and diluted.

Definitions. Revenue Growth % is (revenue this year − revenue last year) ÷ revenue last year. Effective Tax Rate % is total tax expense ÷ PBT (the FY2023 figure of 27.65% reproduces from Section 5.2). Basic EPS is profit per share on the weighted average number of shares. Diluted EPS also allows for shares that could be issued, so it is equal to or slightly below basic EPS.

The Expense Breakdown that the project plan lists under profitability is built as its own page (Page 4), and is not part of the Page 2 screenshot.

6.4 Page 3: Financial Health & Cash Flow

Page 3 covers the balance sheet position, liquidity and cash flow (Figure 8).

Figure 8: Page 3, Financial Health & Cash Flow.

Visual	Type	Value or fields shown	Financial significance
Total assets vs Total equity and liabilities (titled “Sum of Value_Cr”)	Clustered column	Both by Fiscal_Year	Shows balance sheet size and confirms the two sides of the balance sheet match.
Current Ratio	Line	FY2023 to FY2026	Current assets divided by current liabilities. Above 1 means short-term assets cover short-term obligations.
Investing Cash Flow and Financing Cash Flow	Clustered column	By Fiscal_Year	Shows cash spent on investments and cash paid to or raised from financing sources.
Working Capital	Line	₹31.7K to ₹51.2K	Current assets minus current liabilities: the short-term funding cushion.
Operating Cash Flow	Column	By Fiscal_Year	Cash generated by the core business after tax paid.
Free Cash Flow	Line	19.9K to 34.0K	Operating cash flow minus expenditure on property, plant and equipment and intangibles: cash left after investing in the business.

Definitions. Free Cash Flow reproduces for FY2023 as 22,467 − 2,579 = 19,888 (Section 5.2). Total Equity is listed in the project plan, but a separate Total Equity value or visual does not appear in the screenshots.

6.5 Page 4: Expense Breakdown

Page 4 is a donut chart titled “Infosys Expense Breakdown by Category (FY2023–FY2026)” (Figure 9).

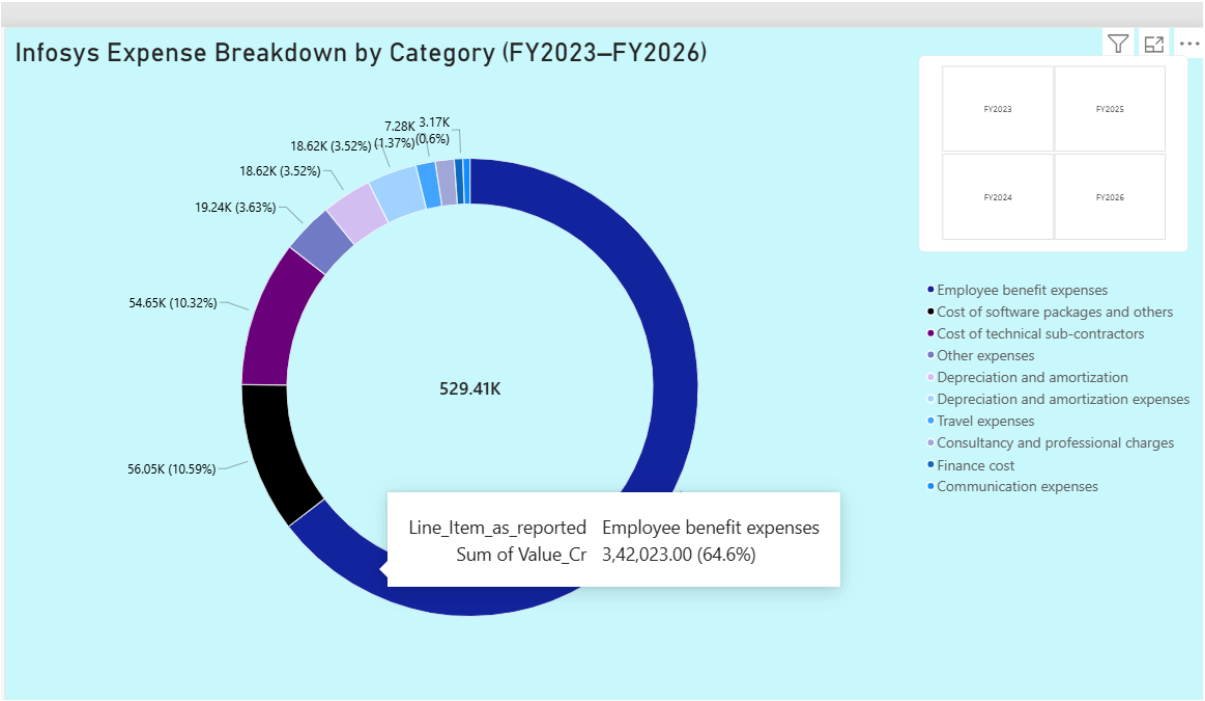

Figure 9: Page 4, Expense Breakdown (donut chart with tooltip on Employee benefit expenses).

- **Expense categories.** The legend lists ten line items: Employee benefit expenses, Cost of software packages and others, Cost of technical sub-contractors, Other expenses, Depreciation and amortization, Depreciation and amortization expenses, Travel expenses, Consultancy and professional charges, Finance cost and Communication expenses.
- **Donut chart.** The chart uses Line_Item_as_reported as the category and Value_Cr as the value. The centre shows the total of 529.41K.
- **Data labels and colours.** Each slice is labelled with its value and percentage. Employee benefit expenses use dark navy; other slices use black, purple, blue and lilac shades. Hovering over a slice shows a tooltip, for example Employee benefit expenses with 3,42,023.00 (64.6%).
- **Year slicer.** The same four-tile year slicer appears on this page. The screenshot shows the chart with no single year selected, so it represents all four years.

[To be added: screenshots of the donut with one year selected, the slicer synchronisation setting, and any filter used to keep only expense lines]

Why a donut: it shows each category as a share of total expense. It works here because one category dominates and the rest are small. A bar chart would be easier to read for the small categories.

7. Dashboard Outputs and Observations

Each page is read below. “Observation” means something visible in the screenshot. “Possible explanation” is a reasoned suggestion that the data supplied cannot prove. Calculated changes are in Section 8.

7.1 Page 1: Executive Overview (Figures 5 and 6)

Visual	What it displays	Trend across FY2023 to FY2026
KPI cards	Four-year totals and the overall margin.	Total revenue ₹6,42,077 crore, net profit ₹106.58K crore, PBT ₹1,46,913 crore, margin 16.60%.
Total_expenses vs Total Revenue	Expenses and revenue per year.	Revenue 147K, 154K, 163K, 179K. Expenses 116K, 122K, 129K, 142K. Both rise every year.
Total Revenue	Revenue per year.	146.8K, 153.7K, 163.0K, 178.7K. Increases of 6.9K, 9.3K and 15.7K.
Total Net Profit	Net profit per year.	24.1K, 26.2K, 26.8K, 29.5K. Increases of 2.1K, 0.6K and 2.7K.

Observation. Revenue increased by a larger amount each year, while net profit rose only 0.6K in FY2025 despite a 9.3K rise in revenue. Expenses rose in step with revenue throughout.

Financial significance. The gap between revenue and total expenses widened from about 31K to about 37K (rounded labels), which is why profit grew. The flat FY2025 net profit is the main unusual movement on this page.

7.2 Page 2: Profitability Analysis (Figure 7)

Visual	What it displays	Trend across FY2023 to FY2026
Revenue Growth %	Annual revenue growth.	4.70% (FY2024), 6.06% (FY2025), 9.61% (FY2026). Growth speeds up each year.

Visual	What it displays	Trend across FY2023 to FY2026
Effective Tax Rate %	Tax as a share of PBT.	27.65%, 27.06%, 28.87%, 26.31%. Rises in FY2025, falls sharply in FY2026.
PBT, Revenue and Net Profit	Three measures per year.	PBT 33K, 36K, 38K, 40K. Revenue 147K, 154K, 163K, 179K. Net profit 24K, 26K, 27K, 29K.
Net Profit Margin %	Profit as a share of revenue.	16.43%, 17.08%, 16.41%, 16.50%. Peak in FY2024, dip in FY2025.
Basic vs Diluted EPS	Profit per share.	Basic 57.6, 63.4, 64.5 and diluted 57.6, 63.3, 64.3 for FY2023 to FY2025. The FY2026 point is not visible in the screenshot.

Observation. The tax rate peak in FY2025 (28.87%) lines up with the margin dip (16.41%), and the tax rate fall in FY2026 (26.31%) lines up with a margin recovery. Basic and diluted EPS are very close in every year shown.

Possible explanation (not verified). A higher tax charge in FY2025 would reduce net profit for a given PBT. The reasons for the tax rate movement are not in the data supplied.

Reading note. The margin and tax rate charts use narrow axes (about 16.4% to 17.1% and 26% to 28.5%) and smoothed lines. This makes small changes look large. The margin moved within a range of 0.67 percentage points.

7.3 Page 3: Financial Health & Cash Flow (Figure 8)

Visual	What it displays	Trend across FY2023 to FY2026
Total assets vs Total equity and liabilities	Balance sheet totals.	126K, 138K, 149K, 156K. The two bars are equal in every year.
Current Ratio	Liquidity.	1.81, 2.31, 2.27, 1.98. Peaks in FY2024, then falls.
Investing and Financing Cash Flow	Cash used in investing and financing.	Financing outflow 27K, 18K, 24K, 40K. Investing −1K in FY2023; no investing bar is visible for FY2024 to FY2026.
Working Capital	Short-term cushion.	₹31.7K, ₹50.6K, ₹54.2K, ₹51.2K. Peaks in FY2025.
Operating Cash Flow	Cash from operations.	22K (FY2023), 25K (FY2024), 36K (FY2025), 34K (FY2026). The bars are ordered FY2025, FY2026, FY2024, FY2023, not by year.
Free Cash Flow	Cash after capital spending.	19.9K, 23.0K, 33.5K, 34.0K. Large rise in FY2025, then almost flat.

Observations. Working capital is positive and the current ratio is above 1 in all years. Operating cash flow fell in FY2026 (36K to 34K) while free cash flow stayed level (33.5K to 34.0K). In FY2026 operating cash flow and free cash flow are almost the same figure, which implies very little capital expenditure that year. In FY2023 the difference was about 2.6K. FY2026 financing outflow of 40K is the largest of the four years.

Possible explanation (not verified). The FY2026 gap between operating and free cash flow may mean capital expenditure was low, or that the expenditure line was not captured for FY2026. The data should be checked (Appendix A).

7.4 Page 4: Expense Breakdown (Figure 9)

What it displays. The share of each expense category in the 529.41K total for FY2023 to FY2026.

Category (as labelled)	Value (₹ crore)	Share
Employee benefit expenses	3,42,023	64.6%
Cost of software packages and others	56.05K	10.59%
Cost of technical sub-contractors	54.65K	10.32%
Other expenses	19.24K	3.63%
Depreciation and amortization	18.62K	3.52%
Depreciation and amortization expenses	18.62K	3.52%
Remaining slices (labelled 7.28K and 3.17K, and others)	Smaller amounts	1.37%, 0.6%, and others

Observation. Employee benefit expenses are about two thirds of the total. Employee benefits, software packages and sub-contractors together are about 85.5% (64.6% + 10.59% + 10.32%). The slice labels for the smaller categories are not matched to category names in the screenshot, so they are not assigned here.

Caution. The duplicated depreciation amounts discussed in Section 5.3 may overstate the total, which would slightly understate the employee cost share.

8. Financial Analysis and Business Insights

8.1 Summary of the four years

Values are taken from the dashboard labels. K means thousand, so 146.8 is ₹146,800 crore. Chart labels are rounded.

Metric	FY2023	FY2024	FY2025	FY2026
Revenue (₹ thousand crore)	146.8	153.7	163.0	178.7
Total expenses (₹ thousand crore)	116	122	129	142
PBT (₹ thousand crore)	33	36	38	40
Net profit (₹ thousand crore)	24.1	26.2	26.8	29.5
Revenue growth (%)	–	4.70	6.06	9.61
Net profit margin (%)	16.43	17.08	16.41	16.50
Effective tax rate (%)	27.65	27.06	28.87	26.31
Basic EPS (₹)	57.6	63.4	64.5	Not visible
Diluted EPS (₹)	57.6	63.3	64.3	Not visible
Total assets = equity and liabilities (₹ thousand crore)	126	138	149	156
Current ratio	1.81	2.31	2.27	1.98
Working capital (₹ thousand crore)	31.7	50.6	54.2	51.2

Metric	FY2023	FY2024	FY2025	FY2026
Operating cash flow (₹ thousand crore)	22	25	36	34
Investing cash flow (₹ thousand crore)	−1	Not visible	Not visible	Not visible
Financing cash flow (₹ thousand crore)	−27	−18	−24	−40
Free cash flow (₹ thousand crore)	19.9	23.0	33.5	34.0

8.2 Changes between years

Metric	FY23 to FY24	FY24 to FY25	FY25 to FY26	FY23 to FY26
Revenue	+4.70%	+6.06%	+9.61%	≈ +21.7%
Total expenses	≈ +5.2%	≈ +5.7%	≈ +10.1%	≈ +22.4%
PBT	≈ +8% to +9%	≈ +5% to +6%	≈ +5% to +6%	≈ +20% to +21%
Net profit	≈ +8.7%	≈ +2.3%	≈ +10.1%	≈ +22.3%
Net profit margin	+0.65 pp	−0.67 pp	+0.09 pp	+0.07 pp
Effective tax rate	−0.59 pp	+1.81 pp	−2.56 pp	−1.34 pp
Basic EPS	+10.1%	+1.7%	Not visible	+12.0% (FY23 to FY25)
Total assets	≈ +9.5%	≈ +8.0%	≈ +4.7%	≈ +23.8%
Working capital	+59.6%	+7.1%	−5.5%	+61.5%
Current ratio	+0.50	−0.04	−0.29	+0.17
Operating cash flow	≈ +2.5K	≈ +11K	≈ −2K	≈ +11.5K (≈ +51%)
Financing outflow	9K smaller	6K larger	16K larger	13K larger (≈ +48%)
Free cash flow	+15.6%	+45.7%	+1.5%	+70.9%

pp = percentage points. Rows marked ≈ use rounded chart labels. The PBT row is shown as a range because only rounded labels are visible. Net profit growth of ≈ 22.3% is the figure from my calculation; the rounded labels (24.1K and 29.5K) give 22.4%, which is consistent within rounding.

8.3 Revenue growth

Revenue grew from ₹146.8K crore to ₹178.7K crore, an increase of about ₹31.9K crore or 21.7%. The growth rate rose each year (4.70%, 6.06%, 9.61%), and the absolute increase more than doubled from 6.9K in FY2024 to 15.7K in FY2026. FY2026 is therefore the strongest growth year of the period.

Possible explanation (not verified). The dataset has no segment, client, geography or volume information, so the reason for the acceleration cannot be determined from this project.

8.4 Net profit and PBT growth

Net profit rose by about 22.3% and PBT by about 20% to 21%. Year by year, net profit grew about 8.7%, 2.3% and 10.1%.

FY2025 is the slowdown year. Revenue grew 6.06% and PBT roughly 5% to 6%, but net profit grew only about 2.3%. The effective tax rate rose from 27.06% to 28.87% in the same year. This suggests the higher tax charge, in addition to slower PBT growth, held back net profit. In FY2026 the pattern reversed: net profit grew about 10.1% against PBT growth of roughly 5% to 6%, and the tax rate fell to 26.31%.

Possible explanation (not verified). The reasons for the tax rate swings (for example one-off tax items) are not in the supplied data.

8.5 Profitability and EPS

Net profit margin stayed between 16.41% and 17.08%. FY2026 (16.50%) is almost the same as FY2023 (16.43%), a change of 0.07 percentage points. Profit grew because revenue grew, not because margins widened.

This is supported by the cost ratio. Total expenses were 79.1% of revenue in FY2023 (116,146 ÷ 146,767). Using the rounded labels, the ratio is about 79% to 80% in every year. At PBT level, the margin was 22.7% in FY2023 and is about 22.4% in FY2026 (40K ÷ 178.7K, rounded), so it is roughly flat to slightly lower.

Basic EPS rose from ₹57.6 to ₹63.4 (+10.1%) in FY2024 and to ₹64.5 (+1.7%) in FY2025, about 12.0% over two years. FY2024 EPS grew faster than net profit (+8.7%). **Possible explanation (not verified):** a lower number of shares. Share count data was not supplied. Diluted EPS is within ₹0.2 of basic EPS in each visible year, so dilution is small.

8.6 Expense composition

Expenses are concentrated in a few lines. Employee benefit expenses are 64.6% of the 529.41K total on the donut. Software packages and sub-contractors are each about 10%. Everything else is individually below 4%. Total expenses grew by about 22.4% against revenue growth of about 21.7% (rounded labels), so costs grew about in line with revenue.

Because employee costs are the largest line, small changes in employee cost per unit of revenue have the largest effect on margin. The dataset has no headcount, so productivity cannot be measured directly.

8.7 Assets, equity and liabilities

Total assets rose from about 126K to 156K (+23.8%). Growth slowed each year: about 9.5%, 8.0% and 4.7%. Total assets equal total equity and liabilities in each year, so the balance sheet is consistent. The split between equity and liabilities is not visible, so statements about leverage cannot be made.

8.8 Liquidity: current ratio and working capital

Working capital was positive in every year. It rose from ₹31.7K to ₹50.6K in FY2024 (+59.6%) and to ₹54.2K in FY2025 (+7.1%), then fell to ₹51.2K in FY2026 (−5.5%). The current ratio followed the same shape: 1.81, 2.31, 2.27, 1.98. In FY2026, Infosys held about ₹1.98 of current assets for each ₹1 of current liabilities.

The ratio stayed above 1 throughout, so short-term liquidity was not under pressure on this measure. The FY2026 fall of 0.29 (about 12.8%) is the largest single-year movement after FY2024's rise and deserves monitoring. **Possible explanation (not verified):** the 40K financing outflow in FY2026 may have reduced cash and investments classified as current assets. The current asset and current liability detail was not analysed.

8.9 Cash flow

Operating cash flow rose from 22.5K in FY2023 to 36K in FY2025 (about +60%) and eased to 34K in FY2026. Free cash flow rose from 19.9K to 34.0K (+70.9%), with most of the increase in FY2025 (+45.7%).

Using the rounded labels, free cash flow was about 83% of net profit in FY2023 and 88% in FY2024, and rose to about 125% in FY2025 and 115% in FY2026. This ratio is not on the dashboard; I calculated it for this report. It shows that cash generation was stronger than reported profit in the last two years, provided the FY2026 free cash flow is correct.

Financing cash outflow was 27K, 18K, 24K and 40K. The composition (for example dividends or buybacks) is not visible in the screenshots, so the reasons for the FY2026 increase cannot be stated. Investing cash flow is visible only for FY2023 (−1K).

Unusual movements to verify. (1) FY2026 operating cash flow fell while free cash flow rose slightly, and the two are almost equal, which implies very low capital expenditure. (2) The investing cash flow bars are missing for FY2024 to FY2026. Both should be checked against the source data.

9. Key Findings

Areas of financial improvement

- Revenue grew by about 21.7% from FY2023 to FY2026, and the growth rate rose each year to 9.61% in FY2026.
- Net profit grew by about 22.3% (₹24.1K to ₹29.5K crore). Free cash flow grew by about 70.9%.

Areas where performance slowed

- Net profit grew only about 2.3% in FY2025 while revenue grew 6.06%. The net profit margin fell to 16.41% and the effective tax rate rose to 28.87%.
- Net profit margin in FY2026 (16.50%) is about the same as FY2023 (16.43%), so profit growth came from higher revenue and not from wider margins.
- Total asset growth slowed from about 9.5% to about 4.7%.

Expense concentration

- Employee benefit expenses are 64.6% of expenses shown on the donut. With software packages and sub-contractors, three lines make up about 85.5%.

Liquidity observations

- Working capital was positive and the current ratio was above 1 in every year. The ratio fell from 2.27 to 1.98 in FY2026, and working capital fell 5.5%.

Cash generation performance

- Free cash flow rose from about ₹19,900 crore to ₹34,000 crore. Operating cash flow fell slightly in FY2026 (36K to 34K).

Financial risks requiring monitoring

- Margin protection: the margin has been flat at about 16.4% to 17.1% and the cost ratio is steady at about 79% to 80% of revenue.
- The current ratio trend after FY2024 and the fall in working capital in FY2026.
- The FY2026 financing outflow of 40K, the largest in the four years.
- Data checks: FY2026 capital expenditure, the missing investing cash flow bars, and possible double counting of depreciation in the donut.

10. Recommendations to Stakeholders

The findings in Section 9 come from the data. The recommendations below are my suggestions based on those findings. They are not proven results.

Area	Supporting observation	Recommendation
Revenue growth	Growth rose from 4.70% to 6.06% to 9.61%.	Find out what drove the FY2026 acceleration using segment, client and geography data, and test whether it can be sustained.
Cost management	Expenses stayed at about 79% to 80% of revenue. Employee, software and sub-contractor costs are about 85.5% of the total shown.	Track each major cost line as a percentage of revenue every year, and focus cost reviews on these three lines.
Employee productivity	Employee benefit expenses are 64.6% of expenses. The dataset has no headcount.	Add headcount to the analysis and track revenue per employee and employee cost as a percentage of revenue.
Profitability	Net profit margin is flat (16.43% to 16.50%). FY2025 profit growth slowed as the tax rate rose.	Monitor PBT margin separately from tax effects so that operating performance is clear, and set a margin target.
Working capital	Working capital fell 5.5% and the current ratio fell to 1.98 in FY2026.	Review the current asset and current liability lines behind the fall, and keep the ratio above an agreed floor.
Cash flow management	Operating cash flow fell in FY2026. Financing outflow reached 40K.	Review the drivers of the operating cash flow decline and the composition of financing outflows, and confirm FY2026 capital expenditure.
Sustainable financial performance	Free cash flow was above net profit in FY2025 and FY2026.	Report a fixed set of measures each year (revenue growth, net profit margin, effective tax rate, current ratio and free cash flow) so changes are seen early.

11. Conclusion

The analysis of Infosys for FY2023 to FY2026 shows an overall improvement in business performance. Revenue increased by about 21.7% and net profit by about 22.3%. Revenue growth accelerated to 9.61% in FY2026.

Profitability was stable, with a net profit margin of 16.50% in FY2026. Net profit growth slowed in FY2025, which shows the need to watch operating costs and the tax charge.

On financial health, working capital was positive and the current ratio stayed above 1 throughout. The ratio fell in FY2026 and should be monitored.

Cash generation was a clear strength. Free cash flow rose from about ₹19,900 crore in FY2023 to ₹34,000 crore in FY2026. The key priorities for management are employee productivity, margin protection, working capital efficiency and sustainable cash generation.

Infosys made positive financial progress over the four years. Some movements in FY2025 and FY2026 need further investigation, and the data checks listed in Appendix A should be completed.

12. Skills Demonstrated

Area	Skills
Data preparation	Loading Excel data with Python and Pandas, handling a multi-row header, inspecting structure, understanding text-formatted financial values.
Data quality	Reconciling subtotals to line items, checking that the balance sheet balances, identifying duplicate or inconsistent categories.
Business intelligence	Designing a four-page Power BI dashboard with KPI cards, trend lines, clustered columns, a donut chart and a year slicer; writing measures in DAX.
Financial analysis	Revenue and profit growth, margins, effective tax rate, EPS, liquidity ratios, working capital, free cash flow and expense composition.
Communication	Separating observations from explanations, quantifying changes, and giving practical recommendations to stakeholders.

Appendix A: Information Not Supplied and Items to Verify

No.	Item	Action
1	Colab code and output for data types, text-to-number conversion, missing values, duplicates, validation and export.	Add screenshots to Sections 4 and 5.
2	Record counts by financial year and by statement, and the final cleaned row count.	Add to Section 5.1.
3	Names of the three hidden columns (of 12) and the full name of the Printed_Report column.	Add to Section 3.3.
4	Contents of START_HERE and SOURCE_LOG, how the data was obtained, and whether figures are consolidated or standalone.	Add to Section 3.1.
5	DAX formulas for all measures and the data model.	Add to Section 6.1.
6	FY2026 EPS is not visible; the EPS chart looks cut off in Figure 7.	Add a full screenshot or the values.
7	Total Equity value or visual is not in the screenshots.	Add a screenshot of the Total Equity measure.
8	Investing cash flow bars are not visible for FY2024 to FY2026.	Check the measure and the source rows.

No.	Item	Action
9	FY2026 operating cash flow (34K) and free cash flow (34.0K) are almost equal, which implies very low capital expenditure.	Check that the FY2026 capital expenditure line was captured.
10	Donut total (529.41K) is about 20K above the sum of annual total expenses (about 509K), and two depreciation categories each show 18.62K.	Check for double counting and correct the category names if they are the same item.
11	FY2026 net profit margin is 16.50% on the dashboard. An earlier summary used 16.49%.	This report uses 16.50%. Confirm the value.
12	Page 4 with a single year selected, and the slicer synchronisation setting.	Add screenshots to Section 6.5.

Dashboard formatting points to consider

- Rename the chart titled “Sum of Value_Cr” and the title “Total_expenses vsTotal Revenue” (missing space).
- Sort the Operating Cash Flow chart by financial year (it is ordered FY2025, FY2026, FY2024, FY2023).
- Use the same number format on all KPI cards (the net profit card uses K, the others full numbers).
- Arrange the year slicer in order (it reads FY2023, FY2025, FY2024, FY2026 across the rows).
- Consider starting the margin and tax rate axes lower, or using straight lines, so small changes do not look large.
- Combine or relabel the two depreciation categories on the donut chart.
